Gugan HealthCare Pharm – Sales & Profit Dashboard Report

Analysis of the Excel business dashboard, financial year April – March

1. Executive Summary

This report interprets the Excel dashboard built for Gugan HealthCare Pharm. The dashboard consolidates sales, purchase, GST and profit data into a single view with KPI cards, trend charts, a category breakdown and a top-products chart. All values are in thousands of rupees (₹ k) unless stated.

The business recorded **total sales of ₹7,151k** against **purchases of ₹3,595k**, paid **₹411k in GST**, and earned a **profit of ₹3,144k**, a **profit margin of 44%**. Sales were steady through the year, with monthly figures staying between ₹553k and ₹624k. The Salbutamol Inhaler is the clear best-selling product.

2. About the Dashboard

The dashboard was built in Microsoft Excel and contains:

- Five KPI cards: Total Sales, Total Purchase, GST Paid, Total Profit and Profit Margin.
- A line chart of Total Sales by Month (April to March).
- A bar chart of Quarterly Sales.
- A doughnut chart of Total Sales by Category.
- A column chart of the Top 5 Products by Sales.
- Two slicers, **Financial Year (FY22 to FY26)** and **Staff** (Arjun, Meena, Priya, Ravi), which let the user filter every visual at once.

3. Key Performance Indicators

Indicator	Value	Share of Sales
Total Sales	₹7,151k	100%
Total Purchase	₹3,595k	about 50%

Indicator	Value	Share of Sales
GST Paid	₹411k	about 5.7%
Total Profit	₹3,144k	44%

Observations

- Purchases (cost of goods) consume about half of sales revenue.
- The figures reconcile: sales minus purchases minus GST gives roughly ₹3,145k, matching the reported profit. This suggests profit is calculated after GST.
- A 44% margin is healthy and indicates good buying terms and pricing.

4. Monthly Sales Trend

Month	Sales (₹k)	Month	Sales (₹k)
Apr	560	Oct	595
May	600	Nov	613
Jun	595	Dec	591
Jul	623	Jan	611
Aug	581	Feb	553
Sep	604	Mar	624

Observations

- Average monthly sales are about ₹596k.
- The **peak months** are March (₹624k) and July (₹623k).
- The **lowest month** is February (₹553k), about 7% below average. February is also the shortest month, which likely explains part of the dip.
- Sales grew about 11% from April (₹560k) to March (₹624k), ending the year on a high.
- The pattern is a stable zig-zag rather than a sharp seasonal swing, showing consistent demand, as expected for essential medicines.

5. Quarterly Sales

The chart shows Q1 at ₹1,755k, Q2 at ₹1,808k, an unlabeled first bar at ₹1,204k and Q4 at ₹2,383k.

Observations

- Q1 (Apr to Jun) and Q2 (Jul to Sep) match the monthly figures exactly.
- The remaining bars do not reconcile with the monthly data. From the months, Q3 (Oct to Dec) should be about ₹1,799k and Q4 (Jan to Mar) about ₹1,788k. The four bars still add up to the ₹7,151k total, so the problem appears to be in how months are grouped into quarters, not in the totals.
- To fix this, check the quarter grouping in the helper column or pivot so Q1 to Q4 map to Apr–Jun, Jul–Sep, Oct–Dec and Jan–Mar, and remove the stray unlabeled bar.

6. Sales by Category

Category	Share of Sales
Others	45%
Respiratory	about 26%
Supplement	15%
Antibiotic	14%

Observations

- "Others" is the largest slice at 45%. A category this large hides useful detail, and splitting it (for example pain relief, digestive, diabetes, skin care) would give better insight.
- Respiratory medicines are the strongest named category, supported by the Salbutamol Inhaler and Cough Syrup.
- Supplements and antibiotics each contribute roughly 15%.

7. Top 5 Products by Sales

Rank	Product	Sales (₹k)	Share of Total Sales
1	Salbutamol Inhaler	959	about 13.4%
2	Azithromycin 500mg	597	about 8.3%
3	Cough Syrup 100ml	470	about 6.6%
4	Calcium + D3	463	about 6.5%
5	Amoxicillin 500mg	423	about 5.9%

Observations

- The top five products together bring in about ₹2,912k, roughly **41% of total sales**.
- The Salbutamol Inhaler sells about 60% more than the second-best product, so it is the most important item to keep in stock.
- Two antibiotics (Azithromycin and Amoxicillin) and two respiratory products appear in the top five, showing demand centred on common acute and respiratory conditions.

8. Key Insights

1. **Healthy profitability:** a 44% margin with a stable monthly sales base.
2. **Consistent demand:** monthly sales vary by only about ±6% around the average.
3. **Product concentration:** about 41% of revenue comes from five products, so stock-outs of these items would hurt sales noticeably.
4. **Respiratory strength:** respiratory products lead the named categories.
5. **Strong finish:** March was the best month of the year.

9. Conclusion

Gugan HealthCare Pharm shows strong financial health, with steady sales, a 44% profit margin and a clear set of best-selling products. The main opportunities are to reduce dependence on a few products, break down the large "Others" category, correct the quarterly grouping, and strengthen February sales. With these improvements, the Excel dashboard can serve as a reliable monthly management report.
